China's central bank officials said Wednesday that China's renminbi or RMB-denominated securities and derivatives market is maturing, with the country’s regulatory mechanism for RMB-background trading moving closer to key international standards.

"China should set the carbon peak and quota allocation in different regions through the national carbon market, which is the most effective and reasonable way to achieve carbon neutrality by 2060, while experts predicted that carbon emissions from the industrial sector would peak in 2025," Zou said.

The central bank is working to support “green” economic development by reducing carbon emissions by 2030 and achieving carbon neutrality by 2060, while experts predicted that carbon emissions from the industrial sector would peak in 2025. The Vice-Finance Minister of the People’s Bank of China, Xuan Zhu, said Wednesday that China’s financial system is an important part of the country’s overall strategy to achieve carbon neutrality by 2060, while experts predicted that carbon emissions from the industrial sector would peak in 2025.

China has just established the cross-border trade policy market, which is the most effective and reasonable way to achieve carbon neutrality by 2060, while experts predicted that carbon emissions from the industrial sector would peak in 2025. The Vice-Finance Minister of the People’s Bank of China, Xuan Zhu, said Wednesday that China’s financial system is an important part of the country’s overall strategy to achieve carbon neutrality by 2060, while experts predicted that carbon emissions from the industrial sector would peak in 2025.
